Sector Allocation

Please note that there are additional risks associated with investing in funds that lack industry diversification. Funds whose investments are concentrated in a specific industry, sector or geographic area may be subject to a higher degree of market risk than funds whose investments are diversified and may not be suitable for all investors.

Fund Objective

The Sterling Capital Diverse Multi-Manager Active ETF seeks long-term capital appreciation through strategies managed by sub-advisers that are majority diverse-owned (i.e., greater than 50% owned and/or controlled by persons of designated diverse backgrounds, including women, racial minorities, LGBTQ+ individuals, veterans, and disabled individuals). There is no guarantee that any investment strategy will achieve its objectives, generate profits or avoid losses.

Investment Philosophy

The Diverse Multi-Manager Active ETF:

- Uses a proprietary quantitative-based asset allocation approach, which tests historical data to identify variables that have been predictive of asset class returns, is utilized to avoid emotional and cognitive biases that tend to lead to poor investment decisions.
- Employs a comprehensive investment manager due diligence process to identify strategies that possess characteristics that have historically been associated with long-term relative performance consistency.
- Seeks to combine complementary strategies in order to enhance the portfolio's risk and return profile.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Sterling Capital Focus Equity ETF. This and other important information about the Fund is contained in the prospectus, which can be obtained at www.sterlingcapital.com/ETF or by calling 888.637.7798. The prospectus should be read carefully before investing. The Sterling Capital Focus Equity ETF is distributed by Northern Lights Distributors, LLC, member FINRA/SIPC. Sterling Capital Management is not affiliated with Northern Lights Distributors, LLC.

Additionally, he was a senior equity research associate at William & Blair Company. Jeremy received his B.A. in Economics from Wheaton College and his M.B.A. from the University of Chicago's Booth School of Business. He holds the Chartered Financial Analyst® designation.

Disclosures:

An index is an unmanaged group of stocks considered to be representative of different segments of the stock market in general. You cannot invest directly in an index and unmanaged index returns do not reflect any fees, expenses or sales charges. The referenced indices are shown for general market comparisons and are not meant to represent the Fund. It should be noted that there will be differences in the composition of the portfolio when compared to the benchmarks listed. Those differences will need to be considered when comparing the results.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. The Morningstar Style Box is a nine-square grid that provides a graphical representation of the "investment style" of stocks and mutual funds. For stocks and stock funds, it classifies securities according to market capitalization (the vertical axis) and growth and value factors (the horizontal axis).

Technical Terms: Market Capitalization: the most recent market value of a company's outstanding shares. The Market Cap is equal to the current share price multiplied by the number of shares outstanding. P/E Ratio: the relationship between a company's stock price and earnings per share (EPS). The P/E ratio shows the expectations of the market and is the price you must pay per unit of current earnings (or future earnings, as the case may be). Earnings Per Share (EPS): a key metric used to determine the common shareholder's portion of the company's profit. EPS measures each common share's profit allocation in relation to the company's total profit. Active Share: measures the degree of active management by a portfolio manager represented as a percentage of the fund's holdings that differ from the benchmark. Turnover: the rate of which assets in a fund are bought and sold by the portfolio managers. Dividend Yield is a financial ratio that measures the annual value of dividends received relative to the market value per share of a security. In other words, the dividend yield formula calculates the percentage of a company's market price of a share paid to shareholders in the form of dividends. (Technical definitions are sourced from Corporate Finance Institute and Investopedia.)

The Chartered Financial Analyst® (CFA) charter is a graduate-level investment credential awarded by CFA Institute, the largest global association of investment professionals. To earn the CFA charter, candidates must: 1) pass three sequential, six-hour examinations; 2) have at least four years of qualified professional investment experience; 3) join CFA Institute as members; and 4) commit to abide by, and annually reaffirm, their adherence to the CFA Institute Code of Ethics and Standards of Professional Conduct.

A Note on Indices: The volatility of an index varies greatly. All indices are unmanaged and investments cannot be made directly in an index.

The Russell 1000® Index measures the performance of the large-cap segment of the U.S. equity universe. It is a subset of the Russell 3000® Index and includes approximately 1,000 of the largest securities based on a combination of their market cap and current index membership. The Russell 1000® represents approximately 92% of the U.S. market. The Russell 1000® Index is constructed to provide a comprehensive and unbiased barometer for the large-cap segment and is completely reconstituted annually to ensure new and growing equities are included.

Sterling Capital Management LLC, a separate subsidiary of Truist Financial Corporation, serves as investment adviser to the Sterling Capital Diverse Multi-Manager Active ETF and is paid a fee for its services. Shares of the Sterling Capital Diverse Multi-Manager Active ETF are not deposits or obligations of, or guaranteed or endorsed by, Truist Bank or its affiliates. The Sterling Capital Diverse Multi-Manager Active ETF is not insured by the FDIC or any other government agency. The Sterling Capital Diverse Multi-Manager Active ETF is distributed Northern Lights Distributors, LLC, member FINRA/SIPC, which is not affiliated with Truist Bank or its affiliates.

Risks: Investing involves risk. Investment return and principal value of an investment will fluctuate, and an investor's shares, when redeemed, may be worth more or less than their original cost.

The fund is new with limited operating history. ETFs are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. ETFs are subject to issuer risks and other risks specific to the Fund.

Shares of any ETF are bought and sold at market price (not NAV), may trade at a discount or premium to NAV and are not individually redeemed from the Fund. Brokerage commissions will reduce returns.

ESG Risk: An ESG investment strategy limits the types and number of investment opportunities available and, as a result, the strategy may underperform other strategies that do not have an ESG focus. An ESG investment strategy may result in the Fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. The earnings and prospects of mid-capitalization sized companies are more volatile than larger companies and may experience higher failure rates than larger companies.

Mid-Capitalization Companies Risk: Mid-capitalization companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures and may have limited markets, product lines, or financial resources and lack management experience.

Quantitative Modeling Risk: The Fund employs quantitative models as a management technique. These models examine multiple economic factors using various proprietary and third-party data. The results generated by quantitative analysis may perform differently than expected and may negatively affect Fund performance for various reasons.
